Effect of Ethanol on Respiratory Rate of Goldfish

Chris Horner

Biology 202

February 28, 2011

Introduction

Alcohol is a known central nervous system depressant and thus effects change on various aspects of physiological functions. Ethanol has long been thought to be a respiratory depressant in animals. However, large doses are usually required to induce noticeable effects on respiration. Deaths from acute alcohol intoxication have long been believed to be due to respiratory failure in humans (Johnstone and Witt 1972). Several studies have documented this. Loomis (1952), Klingman and Haag (1958), and Malt and Baue (1971) found that dogs intoxicated with ethyl alcohol will invariably die of respiratory failure. These effects occur at rather high doses and similar effects are expected to occur with humans (Kaye and Haag 1947). Studies on human alcohol consumption indicate that the effects associated with ethanol ingestion depend on many variables. Whether that person is a chronic user contributes to tolerance to ethyl alcohol. However, an overwhelming amount of evidence supports the hypothesis that alcohol does indeed slow bodily functions. With that in mind we set out to determine if alcohol is, indeed, a depressant then it would effect some sort of change in respiratory rates of goldfish. Specifically, we hypothesized that the alcohol would slow the respiratory rates of our test subjects and that the effects would be dose dependent.

In our experiment our sample fish population would be subjected to different levels of alcohol concentration and opercular beats would be measured. The inebriation vehicle chosen is that of direct addition of the ethanol to the subject's aqueous environment with the assumption that ethanol freely diffuses across the gills (Johnston and Bernard 1983). Thus, blood ethanol concentrations of the fish would be approximately equivalent to that of their surroundings.

This is an open access book. The International Conference on Educational Technology and Management (ICEMT) is held to bring together academics, researchers, teachers, educational entrepreneurs, practitioners, and policy makers. They are responsible for implementing educational technology by leveraging resources through education management to create and enable ecosystem capabilities and access to education. The Covid-19 pandemic teaches that aspects of information and communication technology in education management are full of limitations. Inevitably, educational users have moved dramatically to online channels. Students and teachers are accustomed to learning from home. There are opportunities as well as challenges. Although the pandemic isn't over yet, future updates are needed.

This volume is a collection of papers that present IT management perspectives from professionals around the world. The papers seek to offer new ideas, refine old ones, and pose interesting scenarios to help the reader develop company-sensitive management strategies.

Language, Corpora, and Technology in Applied Linguistics Muhammad Afzaal, Swaleha Bano Naqvi, Geng Qiang, 2023-11-27. As culture and society has become more digitalized, especially when computer science and digital technologies have entered a new era in the twenty-first century, translation studies began to utilize a wide range of tools to enhance its reading of texts and contexts without which translation both as a practice and as a theorization could barely persist. It has become more apparent that two extreme poles between macro and micro visions have formed the diversified terrains of translation studies. On the one hand, technologies like NLP, topic modeling, network analysis, and data visualization make distant reading become possible, thus allowing us to

have a paradigmatic view of how human s ideas beliefs values knowledge and even emotions have spread in some patterns across cultural geographical and language divides in world history On the other hand corpus methods such as the use of keywords collocates and concordance lines changed the way by which texts were closely read from linear to vertical With microscope like corpus tools we could go deeper into the texture for perception of nuanced meaning While considering a fact that translation is seldom mono modal in conveying meaning we have to reconceptualize context as a multimodal environment where audio visual and other resources interact to convey and make meaning With regard to the fast development of digital technology translation studies take an active role in gaining an enhanced capability in promoting transformation Complexity has been favored in terms of theoretical framework and methodology New questions are asked old ones revisited with novel tools but more areas wait to be cultivated and more questions to be approached by combining quantitative and qualitative methods We could ask if digital technologies would bring new innovation to study of translation history a heavily walled land for traditional humanists who tend to repeat so what to question the less significance of data driven studies The idea of high quality machine translation has become so realistic in today s market that translation educators have to face the shock wave it brought to translation learners and practitioners and rethink the relation between human translators and algorithms Machine translation assisted communication could help remove boundaries for better communication but at the same time it also creates conflicts and leads to confrontation Thus understood it is imperative to give a concerned attention to digital translation studies that is to study translation by resorting to and drawing on the digital technologies This Research Topic is intended to promote current directions and new developments in cross disciplinary critical discourse research We welcome papers which from a critical analytical perspective deal with contemporary social scientific political economic or professional discourses and genres Papers addressing the highlighted topics are especially welcome In giving weight to these topics we wish to call to attention some of the most pressing problems currently facing the world
