[Your Company Name]

5th Grade Class

August 15, 2050

Dear Parents and Guardians,

I hope this letter finds you and your family well! My name is **Mrs. Emily Carter**, and I am thrilled to be your child's 5th-grade teacher for the 2050-2051 school year. I am excited about the learning journey ahead and look forward to partnering with you to ensure your child has a successful and enjoyable year in the classroom.

## A Little About Me:

I have been teaching for 12 years, and my passion is creating a learning environment that fosters curiosity, creativity, and a love for knowledge. My goal is to help each student build confidence in their abilities and develop skills they'll carry with them for years to come. This year, we will focus on enhancing critical thinking, teamwork, and problem-solving through a variety of interactive projects and activities.

## What to Expect This Year:

In 5th grade, we'll explore a range of subjects, including advanced science and technology, mathematics, creative writing, and global history. I encourage students to take risks in their learning and to embrace challenges as opportunities for growth. We'll be using immersive technology like virtual reality (VR) for our history lessons and hands-on robotics kits for STEM projects to bring concepts to life.

You will receive regular updates on our classroom activities and your child's progress through monthly newsletters and our classroom website.

## Communication:

Your involvement is key to your child's success, and I am always open to hearing from you. I will send weekly updates via email, but you are also welcome to reach out to me directly. The best way to contact me is through my email: **[Your Email]**, or you can send a message via the ClassHub app. I strive to respond within 24 hours on weekdays.

We will also hold parent-teacher conferences in October and February, but I am available for

**Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives** Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics

multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
