*Index Catalog of the Scranton Public Library Authors and Subjects, June 30, 1902* Scranton Public Library,1903 **A Primer in Game Theory** Roberto Lucchetti,2011-03-01 A game is an efficient model of interactions between agents for the following basic reason the players follow fixed rules have interests on all possible final outcomes of the game and the final result for them does not depend only from the choices they individually make but also from the choices of other agents Thus the focus is actually on the fact that in a game there are several agents interacting In fact more recently this theory took the name of Interactive Decision Theory It is related to classical decision theory but it takes into account the presence of more

than one agent taking decisions As we shall constantly see this radically changes the background and sometimes even the intuition behind classical decision theory So in few words game theory is the study of taking optimal decisions in presence of multiple players agents Thus a game is a simplified yet very efficient model of real life every day situations Though the first and probably more intuitive applications of the theory were in an economical setting theoretical models and tools of this theory nowadays are spread on various disciplines To quote some of them we can start from psychology a more modern approach than classical psychanalysis takes into account that the human being is mainly an interactive agent So to speak we play everyday with our professors students with our parents children with our lover when bargaining with somebody Also the Law and the Social Sciences are obviously interested in Game Theory since the rules play a crucial role in inducing the behaviour of the agents Not many years after the first systematic studies in Game Theory interesting applications appeared to animals starting with the analysis of competing species It is much more recent and probably a little surprising to know that recent applications of the theory deal with genes in microbiology or computers in telecommunication problems In some sense today many scholars do believe that these will be the more interesting applications in the future for reasons that we shall constantly see later humans in some sense are not so close to the rational player imagined by the theory while animals and computers act in a more rational way than human beings clearly in an unconscious yet efficient manner
