Baltagi,2012-12-06 This book is intended for a first year graduate course in econometrics However the first six chapters have no matrix algebra and can be used in an advanced undergraduate class This can be supplemented by some of the material in later chapters that do not require matrix algebra like the first part of Chapter 11on simultaneous equations and Chapter 14 on time series analysis This book teaches some of the basic econometric methods and the underlying assumptions behind them Estimation hypotheses testing and prediction are three recurrent themes in this book Some uses of econometric methods include i empirical testing of economic theory whether it is the permanent income consumption theory or purchasing power parity ii forecasting whether it is GNP or unemployment in the U S economy or future sales in the computer industry iii Estimation of price elasticities of demand or returns to scale in production More importantly econometric methods can be used to simulate the effect of policy changes like a tax increase on gasoline consumption or a ban on advertising on cigarette consumption It is left to the reader to choose among the available econometric software to use like TSP SHAZAM PcGive HUMMER LIMDEP SAS STATA GAUSS and EViews The empirical illustrations in the book utilize a variety of these software packages Of course these packages have different advantages and disadvantages    *Solutions Manual for Econometrics* Badi H. Baltagi,1998 This manual provides solutions to selected exercises from each chapter of *Econometrics* by Badi H Baltagi starting with Chapter 2 For the empirical exercises some SAS programs are provided to replicate the results Most graphs are plotted using EViews Some of the problems and solutions are obtained from *Econometric Theory* ET and these are reprinted with the pennission of Cambridge University Press I would like to thank Peter C B Phillips and the editors of the Problems and Solutions section Alberto Holly and Juan Dolado for this useful service to the econometrics profession I would also like to thank my colleague James M Griffin for providing many empirical problems and data sets I have also used three empirical data sets from Lott and Ray 1992 The reader is encouraged to apply these econometric techniques to their own data sets and to replicate the results of published articles Some journals authors provide data sets upon request or are readily available on the web Other empirical examples are given in Lott and Ray 1992 and Berndt 1991 Finally I would like to thank my students Wei Wen Xiong Ming Jang Weng and Kiseok Nam who solved several of these exercises Please report any errors typos or suggestions to Badi H Baltagi Department of Economics Texas A M University College Station Texas 77843 4228 Telephone
