work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2 0 and discusses integration of messaging into J2EE   *The SAP Blue Book* Michael Doane,1998   *Programming Visual Basic .NET* Dave Grundgeiger,2002 This is a programmer s complete guide to Visual Basic NET Starting with a sample application and a high level map the book jumps right into showing how the parts of NET fit with VB NET Topics include the common language runtime Windows Forms ASP NET Web Forms Web Services ADO NET transactional applications internationalization security and debugging   **Novell's Guide to NetWare? 5 Networks** Jeffrey F.
