Peter Thomas Sandy and Margaret Rioga

**Abstract**

Community mental health nurses are part of community mental health teams that offer care and support to service users with mental distress. They are generally described as “gate keepers” because they ensure service users’ timely assessment and access to appropriate therapeutic services. Because service users’ needs are unique and constantly changing, community mental health nurses are required to reconceptualise their approaches to care. One approach that has gained popularity in mental health services because it advocates individualised care, collaborative and partnership working is recovery. This chapter uses a recovery framework to discuss the roles of community mental health nurses from a contextual and practical perspective. It uses a case study of a service user with mental distress to illustrate this. To increase understanding of the service user’s recovery journey, key principles of a recovery approach to community mental health nursing are included in the chapter

tenets of evidence based medicine and shows how practices proven effective by clinical services research could improve the lives of many people. Intended to stimulate much needed public discussion, these remarkable contributions cover both general issues such as implementing practices in routine mental health settings including strategies for disseminating evidence based practices to staff members. Ensuring that efforts to implement such practices are informed by the knowledge and experience of administrators, clinicians, patients and advocates. Integrating evidence based practices with the recovery model and focusing on guidelines and algorithms for pharmacologic treatment of people with severe mental illness. Identifying the policy implications of the movement particularly in public sector settings and describing eight courses of action for addressing the gap between science and practice and specific practices such as describing critical components of practices for which substantial evidence exists such as supported employment, dual diagnosis services and assertive community treatment. Developing an evidence base for particular populations such as children and adolescents and geriatric patients and for clinical subgroups such as patients with severe mental illness and posttraumatic stress disorder and implementing a range of practices for each population. Debate in public forums is critical to explaining the benefits of evidence based care and allaying the fears of patients, practitioners, administrators, policy makers and vested interest groups that evidence based care excludes them from the decision making process. Patients need to know that their individual characteristics, preferences and autonomy are highly valued and won't be discounted by rigid adherence to the particular treatments. Practitioners need to know about the credibility of the evidence base and about new techniques and responsibilities and to understand that their favorite practices won't necessarily be excluded during initial attempts to implement evidence based practices. Administrators and policy makers need to know about financing, organizing, implementing and sustaining new practices. Finally, vested interest groups need to know that the introduction of evidence based practices doesn't mean that what they do now is ineffective. This unique and densely informative volume will be welcomed by mental health care professionals and by lawmakers, planners, administrators and others who are charged with the responsibility of providing effective care to vulnerable populations.

*Canadian Journal of Community Mental Health*, 2001      **Consumer case studies** Florida. Legislature. House of Representatives. Committee on Insurance, 1996      *On Being and Having a Case Manager* Jeffrey Longhofer, Paul M. Kubek, Jerry Floersch, 2010-04-05. *On Being and Having a Case Manager* stresses the importance of the process of building relationships in helping clients realize independent lives. Based on a two year study of Marilyn and her case managers, this book emphasizes the intentional exchange of attention and information between case managers, clients and others within the caring network and clearly outlines a practical method for all service providers, clients, family members and close friends to follow. Throughout the day, from moment to moment, relationships fluctuate among doing for, doing with, standing by for support and doing for oneself. By observing Marilyn and her case manager, the authors prove the value of mutually and continuously monitoring these fluctuations within three primary domains: feeling, thinking and acting while

carrying out daily activities These findings show that managers are often stuck in doing for modes of relating Indeed this may be one of the factors that contribute most to case manager and client burnout While some clients with severe and persistent symptoms may in fact frequently require others to do for some like Marilyn may not require as much They may need more doing with and standing by to encourage mastery and the internalization of confidence
