development Everything required for the theoretical practical founding of a European Art Therapy as discipline still has to be done including construction of a communicative bridge to partners in other continents or countries This development work has two strands of development One follows a more theoretical direction with European Art Therapy as a research and teaching subject as an objective in view The other is directed more towards practical fieldwork which in turn can lead to the establishment of funds of experience as well as quantitative and qualitative investigations and thus to theoretical methodical statements In the contributions on hand both connections pervade Naturally the individual articles in this collection do not fully expound the volume of art therapeutic work throughout Europe but they are a source of information and inspiration for the user from theory and or practice who can then find his particular niche with his own specific interests within the cross section and subsequently continue the discourse spatially and objectively

In Recovery Nora Jacobson, 2004 For hundreds of years people diagnosed with mental illness were thought to be hopeless cases destined to suffer inevitable deterioration. Beginning in the early 1990s however, providers and policymakers in mental health systems came to promote recovery as their goal. But what does recovery truly mean? For example, to consumers of mental health services it implies empowerment and greater resources dedicated to healing. To HMOs it can suggest a means of cost savings when benefits cease upon recovery. This book considers recovery from multiple angles. Traditionally, Nora Jacobson notes, recovery was defined as symptom abatement or a return to a normal state of health, but as activists mental health professionals and policymakers sought to develop recovery oriented systems, other meanings emerged. Jacobson's analysis describes the complexities of ideas that have defined recovery in various contexts over time. The first meaning, recovery as evidence, involves the theories, statistics, therapies, legislation, and myriad other factors that constituted the first one hundred years of mental health services provision in the United States. Recovery as experience brought the voices of patients into the conversation, while recovery as ideology drew on both recovery as evidence and recovery as experience to rally support for specific approaches and service delivery models. This in turn became the basis for recovery as policy, which developed as assorted representative bodies such as commissions and task forces planned reforms of the mental health system. Finally, recovery as politics emerged as reformers confronted harsh economic realities and entrenched ideas about evidence, experience, and ideology. Throughout, Jacobson draws on her research in Wisconsin, a state with a long history of innovation in mental health services. Her study there included several years of fieldwork and interviews with the government appointed groups charged with making recovery policy. Thus, *In Recovery* also provides an inside account of the process of policy development and implementation.
