The mechanical conception of the various elements in the driveline has long since been optimised so this book takes a more holistic system oriented view of the problem featuring a comprehensive description of the driveline elements and their operation, paying particular attention to the clutch, a nonlinear model of the driveline for simulation and a simplified model for control design with a standing start driver automaton for closed loop simulation, a detailed analysis of the engagement operation and the related comfort criteria, different control schemes aiming at meeting these criteria, friction coefficient and unknown input clutch torque observers, practical implementation issues and solutions based on experience of implementing optimal engagement strategies on two Renault prototypes.
