McGrew,Linda F. Marchant,Toshisada Nishida,1996-07-28 The great apes chimpanzees bonobos gorillas and orangutans are our closest living relatives sharing a common ancestor only five million years ago We also share key features such as high intelligence omnivorous diets prolonged child rearing and rich social lives The great apes show a surprising diversity of adaptations particularly in social life ranging from the solitary life of orangutans through patriarchy in gorillas to complex but different social organisations in bonobos and chimpanzees As great apes are so close to humans comparisons yield essential knowledge for modelling human evolutionary origins Great Ape Societies provides comprehensive up to date syntheses of work on all four species drawing on decades of international field work zoo and laboratory studies It will be essential reading for students and researchers in primatology anthropology psychology and human evolution **Biological Science** Biological Sciences Curriculum Study,1963 **The Joy of Science** Richard A. Lockshin,2007-11-05 Scientists have great passion What could be more exhilarating than to go to work every day feeling as if you were once again a nine year old called up to the stage to help the magician with his trick To be a researcher is to always be in the position of having the chance to see how the trick works No wonder that many researchers feel that each new day is the most exciting day to be a scientist It therefore is not surprising that scientists have such trouble communicating with non scientists It is difficult for the scientist to understand a life not focused on the desire to understand

But the differences are not that Everyone wants to understand that is one of the factors that make us human The difference is more that scientists limit their definition of comprehension to specific rules of logic and evidence These rules apply and are used in everyday life but often with less rigor or restrictions on evidence **Our Tribal Future** David R.

Samson, 2023-05-30 Winner of the 2023 Balsillie Prize for Public Policy An astounding and inspiring look at the science behind tribalism and how we can learn to harness it to improve the world around us What do you think of when you hear the word tribalism For many it conjures images of bigotry xenophobia and sectarian violence Others may envision their own tribe family friends and the bonds of loyalty that keep them together Tribalism is one of the most complex and ancient evolutionary forces it gave us the capacity for cooperation and competition and allowed us to navigate increasingly complex social landscapes It is so powerful that it can predict our behavior even better than race class gender or religion But in our vast modern world has this blessing become a curse Our Tribal Future explores a central paradox of our species how altruism community kindness and genocide are all driven by the same core adaptation Evolutionary anthropologist David R Samson engages with cutting edge science and philosophy as well as his own field research with small scale societies and wild chimpanzees to explain the science ethics and history of tribalism in compelling and accessible terms This bold and brilliant book reveals provocative truths about our nature Readers will discover that tribalism cannot and should not be eliminated entirely to do so would be to destroy what makes us human But is it possible to channel the best of this instinct to enrich our lives while containing the worst of its dangers
