**Assessment of Data Integrity Risks in Public Blockchain Systems** Florian Mair, 2019-05-23

Since its first use in 2008 blockchain technology has come a long way. It has developed to distributed virtual machines that execute smart contracts and much more. Blockchains have a potential application in many industries and offer great innovation potential for organizations. With all the opportunities and value new technologies can deliver, the risks are often neglected. This is why in this book Florian Mair identifies risks to data integrity on blockchains. Further, he assesses the differences regarding data integrity among private and public blockchains. Mair has found overall 11 risks which are applicable to public blockchains. But even though some of them got rated as a high risk, there is currently no evidence that a blockchain should be considered insecure. The author discusses some actions that can be taken to mitigate the identified risks.

In this book: data security risk management, bitcoin risk assessment, Distributed Ledger Technology, **Security Issues in Communication Devices, Networks and Computing Models**. Budati Anil Kumar, Akella Ramakrishna, Goutham Makkena, Gheorghita Ghinea, 2025-05-08. The importance of addressing security issues in communication devices, networks, and computing models in Industry 5.0 cannot be overstated. Industry 5.0 represents the next phase in the evolution of manufacturing and industrial processes, characterized by increased connectivity, automation, and the integration of smart technologies. Here are several reasons why security is crucial in this context. Industry 5.0 involves the convergence of information technology (IT) and operational technology (OT), making industrial control systems susceptible to cyber threats. A breach in security could compromise critical infrastructure such as power grids, transportation systems, and water treatment plants. Securing computing models and networks is vital for protecting critical infrastructure and ensuring the safety and stability of essential services. Industry 5.0 encourages the use of advanced technologies such as the Industrial Internet of Things (IIoT) and edge computing, leading to increased data exchange and collaboration. Security issues could result in the theft or manipulation of intellectual property, proprietary designs, and sensitive business information. Robust security measures are necessary to safeguard intellectual property, maintain a competitive edge, and foster innovation within Industry 5.0 ecosystems. Communication devices and networks in Industry 5.0 transmit vast amounts of sensitive data, including production data, supply chain information, and operational metrics. Ensuring the integrity and confidentiality of this data is crucial for informed decision making and maintaining a competitive advantage. Security breaches could lead to data manipulation, unauthorized access, and exposure of sensitive information, jeopardizing the trust of stakeholders and partners. Industry 5.0 involves interconnected supply chains where multiple entities collaborate and share data. Weaknesses in communication devices and networks can be exploited to compromise the integrity of the entire supply chain, impacting product quality and safety. Securing communication channels and computing models is vital for maintaining the trustworthiness of the supply chain, ensuring product quality, and minimizing the risk of counterfeit components. In summary, addressing security issues in communication devices, networks, and computing models is fundamental to the successful implementation of Industry 5.0. It not only protects the assets and operations of organizations but also contributes to the

overall safety reliability and sustainability of advanced industrial systems      The rise of non-fungible tokens (NFTs) in fashion and luxury Laura Schneider, 2022-11-21 Master's Thesis from the year 2022 in the subject Business economics Miscellaneous grade 7-8 Bocconi University Department of Management and Technology course M.Sc. International Management language English abstract The concept of the metaverse and non-fungible tokens has become ubiquitous and fashion and luxury companies are faced with the need to define a thorough strategy to tackle its business impact Despite some brands acting at the forefront of NFT adoption the utility of the infant technology remains unclear By conducting a 2x2 factorial design experiment this research creates insights into guidelines for NFT strategies for fashion and luxury companies First the high importance of connecting NFT offers with experiences is confirmed Second a coherence of values between NFT technology and the luxury industry was illustrated Finally the experiment suggested a high difference in perceived utility of real world asset NFTs and digital asset NFTs for mainstream brands while the difference could not be proven in the case of luxury companies In conclusion the NFT strategy matrix was developed which introduces four dimensions of brand loyalty brand collectors brand enthusiasts and brand curious differentiated by their brand loyalty and desired NFT utility This framework aims to provide a tool for fashion and luxury companies to cater their holistic NFT offering to different customer groups In general it is advisable to move from digital asset NFTs toward real world asset NFTs in order to engage consumers with rare experiences in a virtual or physical setting and deploy the technology as an experiential marketing tool
