**New Insights in the Health Benefits of Art** Olivier Beauchet, Auriane Gros, Andy Hau Yan Ho, Ian Koebner, 2024-06-11

In 2019 the World Health Organization demonstrated with a scoping review that art based activities regardless of their characteristics have promising health benefits. More specifically, practicing art based activities was demonstrated to contribute to core determinants of health to play a key role in health promotion and prevention especially with regard to the onset of mental illness and age related physical decline and to assist in acute and end of life care. This report also underscored first a lack of robust data on art's health benefits meaning data obtained with gold standard experimental study designs i.e. randomized control trials and second that certain topics e.g. social health and populations e.g. older community dwellers have been underexamined. In addition, little is known about both the mechanisms of art's health benefits and how to implement an art based activity for health purposes in practice.
