Bitcoin. Potentials, Problems and Regulatory Issues of the

First Mainstream Cryptocurrency Jens Hoffmann,2019-07-31 Seminar paper from the year 2019 in the subject Economics

Monetary theory and policy Heilbronn University of Applied Sciences language English abstract According to conventional

wisdom the cryptocurrency Bitcoin exhibits several improvements compared to the traditional banking system namely its

decentralized structure and a proof of work consensus mechanism However authors frequently discover problems and

propose all kinds of fundamental changes such as completely new consensus mechanisms by which they want to replace the

existing system That raises the question of how the further development of Bitcoin has to be promoted We review the most

relevant literature concerning Bitcoin s current role and future potential from different angles By putting ourselves in the

position of involved actors we find out what they expect from the Bitcoin network and how desirable additional regulatory

measures are for them Although it is generally accepted that appropriate governance can contribute to a more stable and

secure currency cryptocurrencies unique characteristics add a new dimension to this idea That is why we sporadically throw

in comparisons to local currency schemes already in existence in order to conclude how the question of regulating a

decentralized currency must be addressed
