James Tudor,2019      *Modes and Mechanisms of Microbial Growth Inhibitors* Fred Ernest Hahn,1983 It is not certain that the editors of Antibiotics I 1967 Drs GOTTLFF and SHAW fully realized that they were laying the foundation for an entire series of which we present here Vol VI For some time to come this will be the last volume of the Antibiotics series There are several reasons for this Firstly the discovery of medicinally useful antibiotics has leveled off because the number of microbiological products with antimicrobial properties is not infinite In 1972 some 2500 antibiotic substances were known of which approximately one per cent are clinically useful Further search for antibiotics has led to increasing frequency of rediscoveries and drastically decreasing frequency of discoveries of new antibiotics As the search for antibiotics with a standard methodology in conventional ecological niches has exhausted itself there is a paucity of new and interesting substances on which to undertake modes mechanisms of action studies Secondly the mechanism of action field has come of age and its results are now academic knowledge This also holds true for synthetic chemotherapeutic drugs and becomes the case rapidly for toxic substances with anti eukaryotic action The study of mechanisms of action was undertaken for two reasons one was the basic scientific desire to know how antimicrobial substances interfered with microbial biochemistry the second one was the hope that such information would be useful in the premeditated design of synthetic antimicrobials
