**Technologies and Trends in the Halal Industry** Nor Aida Abdul Rahman, Kamran Mahroof, Azizul Hassan, 2023-11-22

With recent technological developments touted also as Industry 4.0 numerous articles published over the years have emphasized the need to investigate the role of technology across all sectors including the halal industry. This book provides a greater understanding of the technologies, trends, and debates associated with the halal industry from different sectors such as food, logistics, pharmaceutical, tourism, medical, cosmetic, and the retail sector. The book adds substantial discussion to the issues and trends of technology applications in the halal industry as well as the theories underpinning halal technology studies. It is in four sections: an overview of the halal industry, selected theories, technology, and recent issues. The contributors explore how technology has evolved and been applied in industry and also look at how Industry 4.0 technologies like blockchain, Internet of Things (IoT), automation, machine learning, and augmented reality are being integrated in the halal supply chain process. Written by well-regarded scholars and international academics from Africa, Europe, Middle East, and Asia, this book provides expert contributions from research, regulatory, and industry perspectives. This book will interest upper-level students, scholars, academics, and practitioners in the various disciplines of tourism and travel, hospitality, food studies, marketing, pharmaceutical, and medical logistics management, Islamic studies, and information technology in the halal industry.

**Crypto Asset Trends** Marcus Tesla, 2025-01-08. *Crypto Asset Trends* offers a comprehensive exploration of how digital currencies and decentralized finance (DeFi) are revolutionizing global financial systems. Starting with the evolution of money from ancient barter to modern cryptocurrencies, the book systematically analyzes how blockchain technology is reshaping traditional financial infrastructure. Through a combination of technical insights, economic principles, and regulatory considerations, it presents a thorough examination of the crypto asset landscape that appeals to both financial professionals and technology enthusiasts. The book's unique strength lies in its interdisciplinary approach, weaving together elements of computer science, economics, and law to explain complex concepts in accessible terms. It progresses logically from blockchain fundamentals to detailed analyses of various crypto assets, including utility tokens, security tokens, and stablecoins, before diving into the emerging DeFi ecosystem. Supporting its arguments with robust data from blockchain analytics, academic research, and market intelligence, the book provides practical frameworks for evaluating crypto projects and understanding their role in investment strategies. Central to the book's analysis is the argument that crypto assets represent more than just a new investment vehicle; they constitute a fundamental restructuring of financial infrastructure. By examining key debates such as environmental impact, regulatory compliance, and the viability of crypto economic models, readers gain a balanced perspective on both the opportunities and challenges in this rapidly evolving field. The focus remains on enduring principles rather than short-term market movements, making it a valuable resource for understanding the future of digital finance.

**Cases for Blockchain in the Insurance Industry** Ricardo Escoda,2021-03-09 Master s Thesis from the year 2020 in the subject Economics Finance grade 1 3 International School of Management Campus Munich language English abstract Blockchain is considered to be a breakthrough technology with many strengths and opportunities but also weaknesses and threats for all industries around the globe It has the potential to revolutionize many sectors but it is not a universal remedy and does not replace every single traditional technology Most businesses do feel insecure whether to invest time and money for Research and Development due to the lack of industry standards and regulations with respect to the technology Before

being able to guarantee suitability and successful implementation in any business it is essential to study the differences between public private hybrid and consortium Blockchain types In areas of application not strongly relying on Blockchain s distributed systems alternative solutions such as Big Data Analytics Artificial Intelligence and Machine Learning might be more valuable Nonetheless Blockchain promises the unique potential for insurance companies to efficiently serve global markets with areas of application mainly concentrating on parts of the VC where bureaucracy can be reduced by automation For instance the use of Smart Contracts where lots of data are analyzed saved distributed and pro cessed By implementing BC fields where the focus is on customer experience such as Payments Data Security Transparency and Developing New Business and Product Ideas can be improved enormously Use cases and new products supported by Blockchain might include P2P Micro Insurances Ad hoc and Parametric Insurance Models Automated Underwriting Reduction of Fraud and Abuse and Health Insurance Processes Real Time Analytics in the Form of SCs Instant Pay Outs Automated Claims Management and Improved Risk Modelling of Insurance Businesses might be achievable by connecting Blockchain and Big Data Contrary to the expectations of the author most industry experts are aware of the benefits and opportunities the technology can bring to their companies Still Blockchain is not anchored in their medium to long term visions and strategies Most of the interviewees would rather act as active observers and early followers than taking the lead proactively Reasons for this behavior are the lack of market standards and regulations the absence of solid Blockchain networks and the shortage of use cases but also the lack of know how and data security concerns
