## New York Water Towers:

**Water Towers New York City** Paolo Nigris, 2013-11-16 This collection of photographs of the water towers of New York City are not only a tribute to these iconic structures of the city's landscape but also a pretext to explore hidden details of its architecture. Rooftop water towers are a unique opportunity to experiment with shapes, forms, and textures, a frequent component of my photographic quest. Inspired by famous paintings like Edward Hopper's *Rooftop* 1926 and by the ever-changing architectural scene, I focused my attention on the cylindrical wooden structures and framed them with the surrounding buildings. This is a collection of many years of walking the streets of New York with my camera. Water is our most precious natural resource. New York City's skyline is dotted with wooden water towers, the result of a 19th century's law requiring all buildings taller than six stories to be equipped with a rooftop water tank. This was necessary to prevent the need for excessively high pressures at lower elevations which could burst pipes. Pressure in the city's pipes can take water up only about half a dozen stories, so a higher building needs either a pumping system or a system of tanks. A water tower seemed like the better solution since it also provides emergency storage for fire protection. A water tower stores 25,000 to 50,000 liters of water until it is needed in the building below. The upper portion of water is skimmed off the top for everyday use while the water in the bottom of the tower is held in reserve to fight fire. When the water drops below a certain level, a pressure switch, level switch, or float valve activates a pump or opens a public water line to refill the water tower. Even today, no sealant is used to hold the water in. The wooden walls are held together with cables but leak through the gaps when first filled. As the water saturates the wood, it swells the gaps close and the tank becomes impermeable.

Ronnie Farley, 2014 Think of the movies, think of any photographic image of the New York skyline and there will undoubtedly be water towers features that are as much a recognisable part of the city as the yellow taxi cabs and the street signs. Ronnie Farley has documented these New York monoliths for over 20 years from every angle and time of day a beautifully photographed and original collection.

**Fantastic Water Towers** Dennis James De Witt, 2017 This book contains a set of fantastic water tower designs and their companion water pumping stations. It dates from the era when municipally supplied water was relatively new. Boston's first municipal water system had been inaugurated to joyous temperance celebrations just fifty years earlier. It was also the era of the City Beautiful Movement, the year when the fabulous urban vision of Chicago's Columbian World's Fair drew over 27 million visitors. And it was an era when architects could really draw. In December of 1889, a relatively new weekly journal, *The Engineering and Building Record*, announced a design competition for Water Towers and pumping stations. Its publisher, Major Henry C. Meyer, a Civil War Medal of Honor recipient, had hired Charles Frederick Wingate, who knew nothing about engineering but was well connected in both literary and social reform circles, including with the Association for the Improvement of the Condition of the Poor and Jacob Riis, author of *How the Other Half*.

Lives In 1879 under Wingate s guidance Major Meyer s journal had initiated a design competition for an improved version of New York s notorious tenement buildings It received over 200 entries and that same year lead to the passage of a tenement reform act In 1880 it held a competition for a model school house This also received nearly two hundred submissions which were judged according on convenience of arrangement security against fire and facility of egress lighting heating and ventilation and sanitary appointments Independently honorable mentions were awarded for architectural merit In June 1889 it published a lengthy illustrated article on Boston s Chestnut Hill High Service Pumping Station That December it announced two competitions One offered a prize for essays on road construction and maintenance reflecting the growing Good Roads Movement The other competition arose from the Chestnut Hill article and reflected a City Beautiful sensibility It specifically expressed concern about the appearance of water towers in prominent elevated locations as being potentially offensive to the eyes of this and future generations and noted that the necessary isolation and elevation of these buildings suggested their sites as pleasure grounds Anticipating that many municipal water systems might be privately owned it also suggested that good design could be a requirement for being awarded a franchise There were seventeen winning and honorable mention submissions created at a moment of transition for a new building type that had hardly existed before in the U S First published over the course of several years in Major Meyer s journal in 1893 these designs were published together in book form This volume reassembles those drawings as originally intended together with brief notes on the context of their creation both in the U S and in Europe and touches upon the later careers of their designers some of whom became well known and most of whom were professionally successful
