Instructions

- 1) You may only type in white boxes.
- 2) Do not use a calculator.
- 3) Do repeats.
- 4) Use the micrometer readings to find the mean diameter and hence area of the wire.
- 5) Plot a graph (on the grid in the "Spare Sheet" below) of $\ln(\frac{1}{A})$ (y-axis) vs $\ln(\frac{1}{L})$ (x-axis). The gradient is $\frac{1}{2\rho}$.
- 6) Use the graph to find the resistivity ρ .
- 7) Do some research to find a candidate metal this wire might be made of. (Hint: being a virtual experiment, no expense was spared in choosing the wire!)
- 8) CPAC-5b is your ability to correctly reference where you find information. Find TWO sites with your candidate metal (one of which is the one you accessed the one).
- 9) Use "Spare Sheet" (below) for your graph and calculations.

Physics Ranking Tasks Solutions:

Ranking Task Exercises in Physics Thomas L. O'Kuma, David P. Maloney, Curtis J. Hieggelke, 2000 Those who have used Ranking Tasks have found that they frequently elicit students natural ideas rather than a memorized response about the behavior of a given physical system. In addition asking students to consider the same situations in a variety of ways often helps them begin to correct any misconceptions they may have. When students realize that they have given different answers to variations of the same question they begin to think about why they responded as they did in each case. This in turn prompts them to consider which responses they believe in more strongly and why. The basic structure of a Ranking Task comprise four elements a description of the physical situation including any constraints and the basis for ranking different arrangements a set of figures showing the different arrangements of the situation to be compared a place to record the ranking of each variation a place to explain the reason for each ranking choice. A CD ROM in the back of the book provides each Ranking Task in a pdf file for ease of use in printing and copying for non commercial classroom needs.

Physics for Scientists and Engineers with Modern Physics Douglas C.

Giancoli, 2008 Key Message This book aims to explain physics in a readable and interesting manner that is accessible and clear and to teach readers by anticipating their needs and difficulties without oversimplifying. Physics is a description of reality and thus each topic begins with concrete observations and experiences that readers can directly relate to. We then move on to the generalizations and more formal treatment of the topic. Not only does this make the material more interesting and easier to understand but it is closer to the way physics is actually practiced.
