Neural Information Processing Peiji Liang, Si Wu, Fanji Gu, 2015-12-22 This book provides an overview of neural information processing research which is one of the most important branches of neuroscience today. Neural information processing is an interdisciplinary subject and the merging interaction between neuroscience and mathematics physics as well as information science plays a key role in the development of this field. This book begins with the anatomy of the central nervous system followed by an introduction to various information processing models at different levels. The authors all have extensive experience in mathematics physics and biomedical engineering and have worked in this multidisciplinary area for a number of years. They present classical examples of how the pioneers in this field used theoretical analysis mathematical modeling and computer simulation to solve neurobiological problems and share their experiences and lessons learned. The book is intended for researchers and students with a mathematics physics or informatics background who are interested in brain research and keen to understand the necessary neurobiology and how they can use their specialties to address neurobiological problems. It also provides inspiration for neuroscience students who are interested in learning how to use mathematics physics or informatics approaches to solve problems in their field Psychology Graham C. Butler, 2008-01-14 Social cognitive neuroscience is an emerging branch of cognitive neuroscience that bridges together social psychology and neuroscience. At its core is an understanding of the relationship between the brain and social interaction. The social cognitive neuroscientist places empirical endeavor within a three stage framework and questions falling under the SCN rubric undergo interrogation at each of these three levels. Firstly we seek to understand a neuroscience of social interactions at the social level. Here we need to understand the motivational and other social factors that drive our behavior and experience in the real world. It goes without saying that any study of the cognitive neuroscience of socially interactive behavior must first be informed by social psychological theory to maintain ecological validity. Second the social cognitive neuroscientist must be an adroit cognitive psychologist and be able to examine interactive behavior from the cognitive level. It is here that information processing models and theories are applied to the understanding of our social behavior. Finally studies at the neural level seek to inform us about the cortical structures as well as the way they interact with other in the mediation of the previous cognitive level. This volume brings together contributions from leading thinkers in both the social cognitive neurosciences and business to provide a comprehensive introduction and overview of a social cognitive neuroscience of the business brain.
