<p>1. Explain how the structure of the cell membrane affects its function.</p>	<p>The cell membrane is a phospholipid bilayer. The hydrophilic heads of the phospholipids face the aqueous environment, while the hydrophobic tails face each other. This structure allows the membrane to be selectively permeable, controlling what enters and exits the cell.</p>	<p>The structure of the cell membrane is crucial for its function. The phospholipid bilayer creates a barrier that is both flexible and strong. The hydrophilic heads interact with water, while the hydrophobic tails repel it, creating a barrier that is impermeable to most substances.</p>	<p>Protein channels and transporters are embedded in the membrane, allowing for the movement of specific molecules. The fluid mosaic model describes the membrane as a dynamic structure with proteins and lipids constantly moving.</p>	<p>The structure of the cell membrane is a key factor in its function. The phospholipid bilayer is a fundamental component of all cells, and its properties determine how the cell interacts with its environment.</p>
<p>2. Describe the role of the cell membrane in maintaining the cell's internal environment.</p>	<p>The cell membrane acts as a barrier that separates the cell's internal environment from the external environment. It maintains the cell's internal pH, ion concentration, and overall chemical balance. It also plays a role in cell signaling and communication with other cells.</p>	<p>The cell membrane is responsible for maintaining the cell's internal environment by acting as a selective barrier. It ensures that the cell's internal conditions remain stable, which is essential for the cell's survival and function.</p>	<p>The cell membrane is a dynamic structure that can change its shape and composition in response to the cell's needs. It is involved in many cellular processes, including cell division, cell growth, and cell death.</p>	<p>The cell membrane is a critical component of the cell's internal environment. It helps to maintain the cell's internal balance and protects the cell from external threats.</p>
