**Security Compliance in Model-driven Development of Software Systems in Presence of Long-Term Evolution and Variants** Sven Matthias Peldszus, 2022-07-13 For ensuring a software system's security it is vital to keep up with changing security precautions, attacks and mitigations. Although model based development enables addressing security already at design time, design models are often inconsistent with the implementation or among themselves. An additional burden are variants of software systems. To ensure security in this context we present an approach based on continuous automated change propagation allowing security experts to specify security requirements on the most suitable system representation. We automatically check all system representations against these requirements and provide security preserving refactorings for preserving security compliance. For both we show the application to variant rich software systems. To support legacy systems we allow to reverse engineer variability aware UML models and semi automatically map existing design models to the implementation. Besides evaluations of the individual contributions we demonstrate the approach in two open source case studies: the iTrust electronics health records system and the Eclipse Secure Storage.

*Ernst Denert Award for Software Engineering 2022* Eric Bodden, Michael Felderer, Wilhelm Hasselbring, Paula Herber, Heiko Koziolek, Carola Lilienthal, Florian Matthes, Lutz Prechelt, Bernhard Rumpe, Ina Schaefer, 2024-03-27 This open access book provides an overview of the dissertations of the five nominees for the Ernst Denert Award for Software Engineering in 2022. The prize, kindly sponsored by the Gerlind Ernst Denert Stiftung, is awarded for excellent work within the discipline of Software Engineering which includes methods, tools and procedures for better and efficient development of high quality software. An essential requirement for the nominated work is its applicability and usability in industrial practice. The book contains five papers that describe the works by Jannik Fischbach (Netlight Consulting GmbH) and fortiss GmbH who won the award entitled Conditional Statements in Requirements Artifacts: Logical Interpretation Use Cases for Automated Software Engineering and Fine Grained Extraction; Christian Kirchhof (RWTH Aachen University) From Design to Reality: An Overview of the MontiThings Ecosystem for Model Driven IoT Applications; Sven Peldszus (Ruhr University Bochum) research about Security Compliance in Model driven Development of Software Systems in Presence of Long Term Evolution and Variants; Florian Rademacher (RWTH Aachen University) work on Model Driven Engineering of Microservice Architectures; and Alexander Trautsch (University of Passau) Usefulness of Automatic Static Analysis Tools: Evidence from Four Case Studies. The chapters describe key findings of the respective works, show their relevance and applicability to practice and industrial software engineering projects and provide additional information and findings that have only been discovered afterwards, e.g. when applying the results in industry. This way the book is not only interesting to other researchers but also to industrial software professionals who would like to learn about the application of state of the art methods in their daily work.
