Urban riverbanks are attractive locations and highly prized recreational environments. The designs of urban river landscapes must fulfill a broad range of requirements: flood control, open space design and ecology are as a rule the three dominant themes and they must often be reconciled within a very restricted space. The river must be understood as a process governed by changing water levels, shifting seasons, erosion and sedimentation. The river environment is not a static entity but constantly changing; the design must be flexible and take this into account. This book is the product of a multi year study that subjected more than fifty Western European projects to a comparative analysis. The result is a systematic catalog of effective strategies and innovative design elements. First, designers and planners are given an overview of the broad and varied spectrum of design possibilities. The book's process oriented approach is especially helpful where the focus is on long term sustainable measures. The publication consists of two linked volumes that enable the reader to consult the systematic catalog and the case study section side by side. The easy to navigate structure and an extensive glossary provide further guidance while the work's highly distinctive design makes it visually appealing as well and invites the reader to leaf through and explore it.

Urban riverbanks are attractive locations and highly prized recreational environments. However, they must meet the requirements of flood control, open space design and ecology at the same time, often a challenging task for the designer in very confined spaces. The book, the result of a study lasting several years, subjects more than 60 exemplary projects to a comparative analysis. The result is a systematic catalogue of strategies and innovative design tools. The designer and planner thus obtains an overview of the range of design possibilities. Eight new case studies from China, Italy, New Zealand, the Netherlands, Germany and Switzerland were selected and added for the enlarged edition of this reference work on riverbank design.

Urban riverbanks are attractive locations and highly prized recreational environments. However, they must meet the requirements of flood control, open space design and ecology at the same time, often a challenging task for the designer. This book is the product of extensive research that identified some 60 best practice examples and subjected them to a comparative analysis. The result is a systematic catalog of effective strategies and innovative design tools that provides readers with an inspiring overview of the broad spectrum of design possibilities for river spaces. Each project is illustrated with photographs taken especially for the book and each design strategy and tool is explained by diagrams. This revised edition introduces ten new case studies chiefly from North America.

River, Space, Design Martin Prominski, Antje Stokman, Daniel Stimberg, Susanne Zeller, 2012
River Space Design is a systematically organised reference book for the design and planning of river spaces. Urban river landscapes need to unite a broad range of

requirements most notably flood control ecological considerations and open space design often within tight space constraints. Taking a process-oriented approach this book offers concrete guidelines for sustainable long-term interventions. Arranged in two volumes this book contains a comparative analysis of more than 50 successful projects alongside rivers and streams in Europe and dissects them into their individual design elements. The result is a catalogue of effective design strategies and tools that provides readers with an attractive and inspiring overview of the broad and varied spectrum of design possibilities for river spaces. Each project is illustrated with photographs taken especially for the book and each principle is illustrated with explanatory diagrams. The book's interdisciplinary structure is of interest to landscape architects, architects, engineers, urban planners and hydrologists alike.
