Objective Coefficient Sensitivity Report

Objective Coefficient Sensitivity Report:

Strategic allocation of resources using linear programming model with parametric analysis: in MATLAB and Excel Solver
Dinesh Gupta, 2014-05-01 Since the late 1940s linear programming models have been used for many different purposes. Airline companies apply these models to optimize their use of planes and staff. NASA has been using them for years to optimize their use of limited resources. Oil companies use them to optimize their refinery operations. Small and medium sized businesses use linear programming to solve a huge variety of problems often involving resource allocation. In my study a typical product mix problem in a manufacturing system producing two products each product consists of two sub assemblies is solved for its optimal solution through the use of the latest versions of MATLAB having the command `simlp` which is very much like `linprog`. As analysts we try to find a good enough solution for the decision maker to make a final decision. Our attempt is to give the mathematical description of the product mix optimization problem and bring the problem into a form ready to call MATLAB's `simlp` command. The objective of this study is to find the best product mix that maximizes profit. The graph obtained using MATLAB commands give the shaded area enclosed by the constraints called the feasible region which is the set of points satisfying all the constraints. To find the optimal solution we look at the lines of equal profit to find the corner of the feasible region which yield the highest profit. This corner can be found out at the farthest line of equal profit which still touches the feasible region. The most critical part is the sensitivity analysis using Excel Solver and Parametric Analysis using computer software which allows us to study the effect on optimal solution due to discrete and continuous change in parameters of the LP model including to identify bottlenecks. We have examined other options like product outsourcing, one time cost, cross training of one operator, manufacturing of hypothetical third product on under utilized machines and optimal sequencing of jobs on machines.

Introduction to Business Analytics Using Simulation Jonathan P. Pinder, 2022-02-06 Introduction to Business Analytics Using Simulation Second Edition employs an innovative strategy to teach business analytics. The book uses simulation modeling and analysis as mechanisms to introduce and link predictive and prescriptive modeling. Because managers can't fully assess what will happen in the future but must still make decisions the book treats uncertainty as an essential element in decision making. Its use of simulation gives readers a superior way of analyzing past data, understanding an uncertain future and optimizing results to select the best decision. With its focus on uncertainty and variability this book provides a comprehensive foundation for business analytics. Students will gain a better understanding of fundamental statistical concepts that are essential to marketing research. Six Sigma financial analysis and business analytics. Teaches managers how they can use business analytics to formulate and solve business problems to enhance managerial decision making. Explains the processes needed to develop report and analyze business data. Describes how to use and apply business analytics software. Offers expanded coverage on the value and application of prescriptive analytics. Includes a wealth of illustrative exercises that are newly organized by difficulty level. Winner of the 2017 Textbook

and Academic Authors Association's TAA Most Promising New Textbook Award in the prior edition Optimization Modelling Ruhul Amin Sarker, Charles S. Newton, 2007-10-15 Although a useful and important tool the potential of mathematical modelling for decision making is often neglected Considered an art by many and weird science by some modelling is not as widely appreciated in problem solving and decision making as perhaps it should be And although many operations research management science and optimization **Introductory Management Science** Gary D. Eppen, 1998 This highly esteemed text introduces readers to the key ideas of modeling and management decision making that will be important to them throughout their careers Addressing the needs of readers interested in both business administration and decision science careers the book provides a conceptual foundation for all topics and the role of spreadsheet modeling techniques in the larger context of business decision making This text fully integrated Excel spreadsheets It is packaged with a free CD ROM which contains the student version of Crystal Ball Software Excel templates plus much much more Part of JIT program **Essentials of Business Analytics** Bhimasankaram Pochiraju, Sridhar Seshadri, 2019-07-10 This comprehensive edited volume is the first of its kind designed to serve as a textbook for long duration business analytics programs It can also be used as a guide to the field by practitioners The book has contributions from experts in top universities and industry The editors have taken extreme care to ensure continuity across the chapters The material is organized into three parts A Tools B Models and C Applications In Part A the tools used by business analysts are described in detail In Part B these tools are applied to construct models used to solve business problems Part C contains detailed applications in various functional areas of business and several case studies Supporting material can be found in the appendices that develop the pre requisites for the main text Every chapter has a business orientation Typically each chapter begins with the description of business problems that are transformed into data questions and methodology is developed to solve these questions Data analysis is conducted using widely used software the output and results are clearly explained at each stage of development These are finally transformed into a business solution The companion website provides examples data sets and sample code for each chapter **Multi-Objective Programming and Goal Programming** Mehrdad Tamiz, 1996-02-19 Most real life problems involve making decisions to optimally achieve a number of criteria while satisfying some hard or soft constraints In this book several methods for solving such problems are presented by the leading experts in the area The book also contains a number of very interesting application papers which demonstrate theoretical modelling analysing and solution of real life problems Spreadsheet Modeling and Decision Analysis Cliff T. Ragsdale, 2006 **Quantitative Decision Making with Spreadsheet Applications** Lawrence L. Lapin, William D. Whisler, 2002 Written for students with a background in algebra this text provides a complete and modern treatment of basic management science methodology The authors survey the variety and power of management science tools working to alleviate students apprehension about the subject and to enable students to recognize on the job situations in which management science methodology can be successfully employed

Emphasizing modeling skills for students of varying mathematical backgrounds the authors explain how to use Microsoft Excel spreadsheets to build skills as they work through problems In general problems are broken into several parts to make difficult concepts easy for students to learn This book s modular structure affords instructors maximum flexibility This text contains a special student version of Palisade Corporation s DecisionTools Suite containing Risk PrecisionTree BestFit TopRank and RiskView This software is expressly provided for student use and requires student authorization to unlock the software for its full one year license Professional customers may use the software for 30 days at which point they must contact Palisade Corporation for a professional version should they wish to continue using the software
