Bluetooth Security Attacks Keijo Haataja, Konstantin Hyppönen, Sanna Pasanen, Pekka Toivanen, 2013-10-28 Bluetooth technology has enjoyed tremendous success and it is now employed in billions of devices for short range wireless data and real time audio or video transfer. In this book the authors provide an overview of Bluetooth security. They examine network vulnerabilities and provide a literature review, comparative analysis of recent security attacks. They analyze and explain related countermeasures including one based on secure simple pairing and they also propose a novel attack that works against all existing Bluetooth versions. They conclude with a discussion on future research directions. The book is appropriate for practitioners and researchers in information security in particular those engaged in the design of networked and mobile devices.

Monitoring the Performance and Operation of Cellular Radio Interfaces using Professional Measurement Tools. Baldomero Coll-Perales, Miguel Sepulcre Ribes, Javier Gozalvez Sempere, 2014-11-11. El presente libro ha sido diseñado para ayudar a los estudiantes del Grado en Ingeniería de Tecnologías de Telecomunicación en el empleo de las herramientas utilizadas en las prácticas de las asignaturas de comunicaciones móviles y para mostrarles cómo analizar y entender los resultados que se obtienen con dichas herramientas. Para ello en primer lugar el libro describe de forma didáctica cómo utilizar las herramientas de medida profesionales empleadas en las prácticas de comunicaciones móviles en la UMH. Dichas herramientas se emplean habitualmente por ingenieros de planificación de radio para monitorizar en tiempo real el rendimiento de las redes de comunicaciones móviles mediante drive tests. Dicha descripción incluye una presentación detallada de la herramienta de testeo profesional Nemo Handy desarrollada por Anite. Dicha herramienta se incluye en un terminal celular en modo ingeniero empleado para monitorizar en tiempo real el funcionamiento y rendimiento de las redes celulares y tomar medidas para su posterior análisis. Dicho análisis se realiza empleando la herramienta Nemo Outdoor descrita con detalle también en el libro incluyendo ejemplos sobre cómo realizar los procesos más relevantes. Finalmente el libro incluye y analiza una serie de medidas realizadas en un sistema celular UMTS HSDPA en activo en Elche. En particular se explica el proceso seguido para realizar dichas medidas empleando Nemo Handy y se analizan mediante Nemo Outdoor las principales funcionalidades de un sistema celular como el establecimiento y finalización de llamadas, la selección y reselección de celdas, el traspaso y el análisis de las descargas de datos y parámetros radio. This book has been designed to guide the students of the Bachelor's in Telecommunications Technology Engineering towards a clear understanding of how to use the laboratory tools and show them how to analyze and understand the collected measurements. In this context the book first introduces and describes how to use the professional measurement tools employed in the laboratory activities of the mobile communications course at UMH. These tools are commonly used by cellular radio engineers to monitor in real time the performance of cellular networks through drive tests. The book first presents the Nemo Handy professional measurement testing tool developed by Anite. This tool is included in an engineering mode cellular handset used to monitor in real time the

operation of cellular networks and collect measurements for post processing Such processing is done using the Nemo Outdoor tool that is also introduced in the book including examples of how to perform the most relevant processing actions Finally this book shows how to conduct some measurement and analysis processes using Nemo Handy and Nemo Outdoor The measurements have been conducted over live UMTS and HSDPA networks in the city of Elche and cover the analysis of important cellular functionalities like establishment and release of a call cell selection and reselection handovers and analysis of data downloads and cellular parameters This chapter shows with practical examples how to conduct the measurements using Nemo Handy and how to interpret with Nemo Outdoor the exchanged cellular signaling messages in order to monitor the operation of cellular networks *A Postphenomenological Inquiry of Cell Phones* Galit Wellner,2015-11-11 Why does the announcement of a new cellphone model ignite excitement and passion Why do most people return home when they forget their cellphones while only few would return for their wallets How did the cellphone technology become so dominant for many of us This book offers an analysis of the historical evolution and of the meanings of this technology in the lives of billions of people The book offers a unique point of view on the cellphone that merges genealogical analysis of its development since the 1990s and philosophical insights into a coherent analytical framework With new concepts like histories of the future and memory prosthesis the book aims to explain the excitement arising from new model announcements and the ever growing dependency on the cellphone through the framing of these experiences in wide philosophical contexts It is the first philosophical analysis of the important roles the cellphone plays in contemporary everydayness
