

# Service Schematics

## Introduction

### CONTENTS

This document is intended for use by authorized Nokia service contractors.

"Service Schematics" was created with focus on customer care. The purpose of this document is to provide further technical repair information for Nokia mobile phones and their full service contracts. It contains additional information such as e.g. "Component Finder". The "Signal overview" page gives a good and fast overview about the most important signals and cell sites in your area. Keeping process times and improving the repair quality is the aim of this document. It is to be used additionally to the service manual and other training or service information such as Nokia bulletins.

All measurements were made using following equipment:

Tools required:	• Phoenix version 2004.14.2.250
Software:	• Nokia PC solution
Spectrum Analyzer:	• Alcatel 91202 with an analog probe
All operator / 3GPP Testers:	• Nokia & Siemens 2960-200
Multi tester:	• Fluke 1750B/2

## RM-159/RM-245

### A NEW FEATURE FOR RM-159/RM-245

We have now added three measurement points which are related to the analog pins shown on the signal overview page. For example clicking on the measurement point guides you to the matching module on the signal overview page. The next click into the measurement signal guides you to the related measurement point on the module. Finally, a third click, now onto the measurement point in the module, takes you back to the starting point inside the schematics.
