Non-Destructive Evaluation (NDE) of Polymer Matrix Composites Vistasp M. Karbhari, 2013-06-30 The increased use of polymer matrix composites in structural applications has led to the growing need for a very high level of quality control and testing of products to ensure and monitor performance over time Non destructive evaluation NDE of polymer matrix composites explores a range of NDE techniques and the use of these techniques in a variety of application areas Part one provides an overview of a range of NDE and NDT techniques including eddy current testing shearography ultrasonics acoustic emission and dielectrics Part two highlights the use of NDE techniques for adhesively bonded applications Part three focuses on NDE techniques for aerospace applications including the evaluation of aerospace composites for impact damage and flaw characterisation Finally the use of traditional and emerging NDE techniques in civil and marine applications is explored in part four With its distinguished editor and international team of expert contributors Non destructive evaluation NDE of polymer matrix composites is a technical resource for researchers and engineers using polymer matrix composites professionals requiring an understanding of non destructive evaluation techniques and academics interested in this field Explores a range of NDE and NDT techniques and considers future trends Examines in detail NDE techniques for adhesively bonded applications Discusses NDE techniques in aerospace applications including detecting impact damage ultrasonic techniques and structural health monitoring

**Smart Composites** Rani Elhajjar, Valeria La Saponara, Anastasia Muliana, 2013-12-14 Smart Composites Mechanics and Design addresses the current progress in the mechanics and design of smart composites and multifunctional structures Divided into three parts it covers characterization of properties analyses and design of various advanced composite material systems with an emphasis on the coupled mechanical and non mechanical behaviors Part one includes analyses of smart materials related to electrically conductive magnetostrictive nanocomposites and design of active fiber composites These discussions include several techniques and challenges in manufacturing smart composites and characterizing coupled properties as well as the analyses of composite structures at various length and time scales undergoing coupled mechanical and non mechanical stimuli considering elastic viscoelastic and or viscoplastic fatigue and damage behaviors Part two is dedicated to a higher scale analysis of smart structures with topics such as piezoelectrically actuated bistable composites wing morphing design using macrofiber composites and multifunctional layered composite beams The analytical expressions for characterization of the smart structures are presented with an attention to practical application Finally part three presents recent advances regarding sensing and structural health monitoring with a focus on how the sensing abilities can be integrated within the material and provide continuous sensing recognizing that multifunctional materials can be designed to both improve and enhance the health monitoring capabilities and also enable effective nondestructive evaluation Smart Composites Mechanics and Design is an essential text for those interested in materials that not only possess the classical properties of stiffness and strength but

also act as actuators under a variety of external stimuli provide passive and active response to enable structural health monitoring facilitate advanced nondestructive testing strategies and enable shape changing and morphing structures
