Washington State is about to enter a new phase of the math wars Since the late 1980s the debate over how best to teach mathematics to schoolchildren has raged worldwide among educators politicians and parents The stakes are high To operate effectively in a global twenty first century economy and polity the United States must provide an education in mathematics that is both excellent and equitable In this volume four scholars at the Washington School Research Center WSRC at Seattle Pacific University present original research drawn from statistical studies of state educational data and from thousands of classroom observations carried out by The BERC Group They assess the current state of math education and review its history and development The authors also provide a dispassionate review of the extensive international national and state literature The in depth observational research in *Winning the Math Wars* confirms that the real issue is neither the approach to teaching traditional or reform nor the type of curriculum If America's goal of educational equity and excellence is to be achieved then math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students The authors' discussion focuses on four principles for improving math teaching and learning fidelity to reform efforts by all involved an emphasis on instruction and instructional tools the critical nature of mathematical knowledge and the need for transformational change *Winning the Math Wars* is an important book for policy makers school leaders practitioners of mathematics education parents and anyone who wants to make sense of the math wars
