Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

When you install your T3, maintenance should consist of, at most, (1) lubrication of the T3 wheel and roller supports (weekly, recommended), and (2) to check ground connections. Failing to check the ground connections may result in a fire hazard. To ground the product, connect the maintenance kit (included) to the ground.

When you install your T3 within the same room required, see through, unobstructed paths to, and from the Recycling Bin(s) every day. Doing so is the easiest way to prevent maintenance problems and difficulties with the product as well as to ensure compliance for the correct facility.
