

Case Study 1: The Ecosystem Mystery

Scenario: In Ms. Garcia's science class, students were tasked with creating models to describe the interactions between the geosphere, biosphere, hydrosphere, and atmosphere. Each group was given specific materials to represent different Earth systems. However, some groups noticed discrepancies in their models and the expected interactions. Ms. Garcia wants the students to identify potential errors in their representations and propose improvements.

Higher-Level Thinking Questions:

1. Remembering (Knowledge): What materials were provided to represent the geosphere, biosphere, hydrosphere, and atmosphere in the models?
2. Understanding (Comprehension): Can you explain the interactions between the different Earth systems based on the instructions given by Ms. Garcia?
3. Applying (Application): How might the students apply their knowledge to identify potential errors in their models?
4. Analyzing (Analysis): What factors might have contributed to the discrepancies observed in the models, and how do these factors relate to Earth's systems?
5. Evaluating (Evaluation): What criteria could the students use to evaluate the success of their models in accurately depicting the interactions between Earth systems?
6. Creating (Synthesis): If the students were to redesign their models, how could they create more accurate representations of the relationships between Earth's systems?
