

Climate Change and Global Warming: Signs, Impact and Solutions

D. S. Matawal and Dafang John Maton

Abstract—There is no gain saying our Planet has changed fundamentally. Our World is undergoing a catastrophic climatic drift and is hotter today than it has been in two thousand years. Global temperatures are believed to be on an ever increasing high, with its attendant consequences and it is feared that the trend will continue if not controlled. Some of the causative agents/ indicators of this menace are human propelled and induced and can be curtailed to the barest minimum. The consequences of not attending to these variables are dire, affecting global temperatures, weather patterns, sea acidity and aquatic life, prevalence of pests and diseases, poor agricultural yield, to mention but a few. This paper is an expose on the imperativeness of, inter-relationship between, and negative impacts of climate change and global warming, on the entire ecosystem. Comparative excerpts are highlighted and solutions proffered.

Index Terms—Climate, ecosystem, global warming, weather patterns.

I. INTRODUCTION

Climate is defined by the Oxford Learner's Dictionary as the regular pattern of weather condition of a particular place. These weather conditions could be classified into mild, temperate, warm and wet depending on season and/ or location. Conclusive evidences however show a drift from the normal pattern of weather condition to a rather harmful and adverse trend as climate is now known to have a negative effect on the environment and invariably on the Ecosystem, both animate and inanimate [1].

The Planet Earth is known to be surrounded by an atmosphere composed primarily of Nitrogen and Oxygen and is 149,600,000 Km from the Sun. Gases known as *GREENHOUSE GASES* contribute to the warming of the Earth's atmosphere by reflecting radiation from the Earth's surface (examples are Carbon dioxide, Ozone and Water Vapor). The term which most appropriately describes the aforementioned process is called Greenhouse Effect, which is the warming of the Earth's surface as a result of atmospheric pollution by gases (Encarta Dictionary). It is now feared that the warming effect are being undesirably increased, causing climatic changes and melting Polar Ice caps.

Since the 1980s, research findings have indicated that the Ozone Layer of the Earth's crust, which is the upper layer of the atmosphere where most atmospheric Ozone gas collects

and absorbs harmful Ultraviolet radiation from the Sun, is being depleted by Industrial pollutants such as Chlorofluoro carbons (CFCs) which are slowly but surely creating holes on this layer of the atmosphere. This is especially so over the Antarctic with the resultant effect of direct penetration of unalloyed, uncushioned radiation, which poses great danger in ripple-effect sequence on the entire Globe.

It can thus be inferred that Climate change in the context of Global trends affects negatively all forms of life since it leads to land degradation, fresh water shortages, food shortages/ insecurity, Global warming, flooding and shelter/ comfortable accommodation deficits, health care challenges etc [1].

II. CLIMATE AND GLOBAL CHANGE ISSUES

The Greenhouse effect is natural and many of these greenhouse gases are actually life-enabling, for without them, heat would escape back into space and the Earth's average temperature would be a lot colder.

However, if the greenhouse effect becomes stronger, and it is, more heat is trapped than needed, and the Earth is becoming less habitable for humans, plants and animals. It can thus be inferred that the ability of greenhouse gases to absorb sunlight is the root cause of global warming.

Carbon dioxide (CO_2), though not the most potent of greenhouse gases, is the most significant one. As seen in Fig. 1, it is released into the atmosphere through animal respiration and when wood and fossil fuels burn or decay. When trees are harvested and used in housing, the carbon remains captive in the wood even though it is no longer living but if it burns or decays, the carbon stored in the wood over its life returns to the atmosphere as CO_2 [2].

Human activity has obviously caused an imbalance in the natural cycle of the greenhouse effect and related processes. In Australia, for example, land clearing and burning vegetation release millions of tons of CO_2 into the atmosphere every year. Scientific measurement over time reveals a clear correlation between CO_2 concentration in the atmosphere and global temperature. Research records also indicate that before the Industrial Revolution, the level of carbon dioxide in the atmosphere was 280 parts per million; today it is 380 ppm [2]. NASA's Earth Observatory is worth quoting, on the effect human activity has on the natural carbon cycle, for example:

"In addition to the natural fluxes of carbon through the Earth system, anthropogenic (human) activities, particularly fossil fuel burning and deforestation, are also releasing carbon dioxide into the atmosphere.

When we mine coal and extract oil from the Earth's crust,

The Warming Papers David Archer, Raymond Pierrehumbert, 2013-04-29 Chosen for the 2011 ASLI Choice Honorable Mention History Category for a compendium of the key scientific papers that undergird the global warming forecast Global warming is arguably the defining scientific issue of modern times but it is not widely appreciated that the foundations of our understanding were laid almost two centuries ago with the postulation of a greenhouse effect by Fourier in 1827 The sensitivity of climate to changes in atmospheric CO₂ was first estimated about one century ago and the rise in atmospheric CO₂ concentration was discovered half a century ago The fundamentals of the science underlying the forecast for human induced climate change were being published and debated long before the issue rose to public prominence in the last few decades The Warming Papers is a compendium of the classic scientific papers that constitute the foundation of the global warming forecast The paper trail ranges from Fourier and Arrhenius in the 19th Century to Manabe and Hansen in modern times Archer and Pierrehumbert provide introductions and commentary which places the papers in their context and provide students with tools to develop and extend their understanding of the subject The book captures the excitement and the uncertainty that always exist at the cutting edge of research and is invaluable reading for students of climate science scientists historians of science and others interested in climate change Climate Change: Myths and Realities, The Discovery of Global Warming Spencer R. Atsunobu Ichikawa, 2012-11-26 Of interest to both researchers and policy makers Suitable for course use

Environmental Protection, China and International Trade Fengan Jiang, 2021-07-07 This book argues for a balanced approach to greening the World Trade Organization WTO ban on China's export duties without opening the floodgates to protectionism As a result of the China Raw Materials and China Rare Earths decisions China is largely prohibited from using export duties to address environmental problems including those associated with climate change This is despite a number of climate studies having suggested that Chinese export duties could be useful for reducing carbon leakage an issue of international concern This book

puts the case for a more balanced approach. It shows that a harsh ban on China's export duties constrains its policy space to protect the environment particularly in the context of climate change. The work presents feasibility tests for various legal solutions that have been discussed for adjusting the ban and it accordingly proposes a more feasible approach that would allow China to help protect the environment without advancing protectionism. The proposed legal option provides a less protectionist alternative to export duties namely export duties plus export duties in combination with supplementary restrictions on Chinese consumption. This analysis also yields insights regarding ways to correct WTO precedents which suggests a moderate alternative response to an important issue behind the Appellate Body crisis. The book will be a valuable resource for academics, researchers and policymakers in the areas of International Trade Law, Environmental Law and China.

Lukewarming Patrick J. Michaels, Paul C. Knappenberger, 2015-10-29. If you could wave a magic wand and make one or two policy or institutional changes to brighten the U.S. economy's long term growth prospects, what would you change and why? That was the question asked to the 51 contributors to this volume. These essays originally appeared in conjunction with a conference on the future of U.S. economic growth held at the Cato Institute in December 2014. Brink Lindsey, Vice President for Research at the Cato Institute and editor of this volume, is pleased to share this insightful and provocative collection with a new audience. The motivation for asking that question should be clear enough to anyone who has been following the dreary economic news of the past few years. Since the Great Recession of 2008-2009, the U.S. economy has experienced the most stubbornly disappointing expansion since World War II. *Reviving Economic Growth* offers a wide-ranging exploration of policy options from an eclectic group of contributors. Think of this collection as a brainstorming session, not a blueprint for political action. By bringing together thinkers one doesn't often see in the same publication, the editor's hope is to encourage fresh thinking about the daunting challenges facing the U.S. economy and, with luck, to uncover surprising areas of agreement that can pave the way to constructive change.

The Enigmatic Realm of **Research Paper On Global Warming**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing short of extraordinary. Within the captivating pages of **Research Paper On Global Warming** a literary masterpiece penned by way of a renowned author, readers attempt a transformative journey, unlocking the secrets and untapped potential embedded within each word. In this evaluation, we shall explore the book's core themes, assess its distinct writing style, and delve into its lasting effect on the hearts and minds of those that partake in its reading experience.
