**Ranking Finance Journals Using Author Affiliation Index** Carl R. Chen,2007 In this paper we use a new method to rank finance journals Traditionally journal qualities are measured either by the citation based impact factor approach or by the survey method Although these two approaches have merits their efficacy is also limited in many ways Author Affiliation Index is a cost effective and intuitively easy to understand approach to journal rankings We define Author Affiliation Index as the ratio of articles authored by faculties at the world s top 80 finance programs divided by the total number of articles by all authors Forty one finance journals are ranked according to this index The effectiveness of the index is comparable to prior citation based and survey based studies We find Author Affiliation Index if properly constructed provides an easy and credible way to supplement the existing journal ranking methods Due to its easiness to construct the index is particularly useful for junior faculty seeking the right journals to publish but is unable to justify the journal quality because these journals are not ranked in existing studies Based upon various definitions of the Author Affiliation Index our findings indicate that Journal of Finance Review of Financial Studies Journal of Financial Economics Journal of Financial and Quantitative Analysis and Journal of Business unambiguously claim the top five spots in finance journal rankings Some newer journals such as Journal of Corporate Finance and Journal of Financial Markets while ranked lower in the other studies score impressively in our analysis Compared with prior studies our ranking is highly correlated with most of those journal rankings Real Estate Finance Wolfgang Breuer,Claudia Nadler,2013-11-08 This special issue offers an interesting overview of the status quo of German research in real estate finance It might also contribute to real estate research moving from a research niche closer to the center of academic interest

**Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis** Giorgos Kouropoulos,Γιώργος Κουρόπουλος,2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrop rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals

the prediction of impact factor from web rank is not possible and presents many divergences **Educational Rankings**
