How to play

Give children a die (D6) or a spinner (D12) two different coloured pencil crayons and a number line that has 0 and 10 at the start and end points.

Children take it in turns to roll the dice three times and then use the digits to create a 3 digit number with two decimal places. E.g., if 1 came to roll it, 3 and then 5, 1 could create the number 543, 3.56 or 5.3 45.

Using crayons, children draw marks their number on the number line with their chosen coloured pencil crayons.

The winner is the first person to mark three numbers in a row without their opponent marking a number in between.

Ways to play

There are a few ways to play this game. Please choose the way that will work best for your class.

In pairs

- Children can work collaboratively here and help support and scaffold each other.
- Supplying questioning prompts and questions can help children to think reasoning.

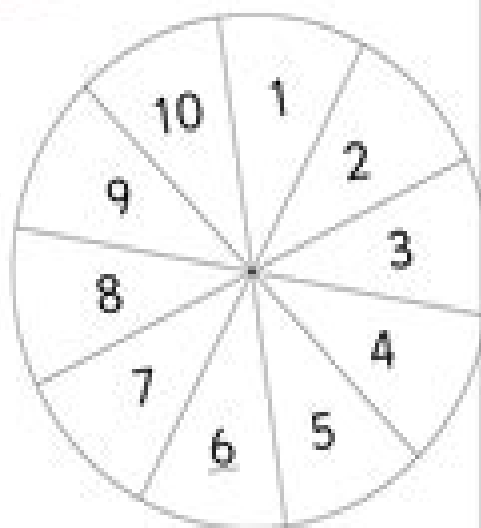

In groups

- Children can work collaboratively here and help support and scaffold each other.
- Supplying questioning prompts and questions can help children to think reasoning.
- Roles, prompts and peer-reviewing in the groups but can be more challenging. Consider assigning roles if thinking group work so each member is actively participating.

As a whole class discussion on groups and teams

- Children can be chosen to challenge the teacher whilst modelling strategies to increase your chances of winning.
- This is more guided and could be used as a starter into the activity to model if necessary. It would be useful to have or to participate so that each child has the opportunity to actively engage in the activity.

- It can be useful to work as a whole class to group the teams and then ask children to take what they've learned and apply it in pairs.

Mine the Gap for Mathematical Understanding, Grades 3-5 John

SanGiovanni,2016-09-16 Being an effective math educator is one part based on the quality of the tasks we give one part how we diagnose what we see and one part what we do with what we find Yet with so many students and big concepts to cover it can be hard to slow down enough to look for those moments when students responses tell us what we need to know about next best steps In this remarkable book John SanGiovanni helps us value our students misconceptions and incomplete understandings as much as their correct ones because it s the gap in their understanding today that holds the secrets to planning tomorrow s best teaching SanGiovanni lays out 180 high quality tasks aligned to the standards and big ideas of Grades 3 5 mathematics including addition and subtraction of multi digit whole numbers multiplication and division of single and multi digit whole numbers foundational fraction concepts foundational decimal concepts and operations with fractions and decimals The tasks are all downloadable so you can use or modify them for instruction and assessment Each big idea offers a starting task followed by what makes it a high quality task what you might anticipate before students work with the task 4 student examples of the completed task showcasing a distinct gap commentary on what precisely counts for mathematical understanding and the next instructional steps commentary on the misconception or incomplete understanding so you learn why the student veered off course three additional tasks aligned to the mathematics topic and ideas about what students might do with these additional tasks It s time to break our habit of rushing into re teaching for correctness and instead get curious about the space between right and wrong answers Mine the Gap for Mathematical Understanding is a book you will return to again and again to get better at selecting tasks that will uncover students reasoning better at discerning the quality and clarity of students understanding and better at planning teaching based on the gaps you see
